

# Henry's Radio

NEW FOR SEPTEMBER

THE NEW HENELEC DISK SYSTEM will be available in two versions. The 'Floppy Tape Recorder' can be used for saving and loading programs, giving an equivalent speed of 125K bits/sec. The 'Floppy Disk Controller' (FDC) card has been designed for use with a Z80 PIO, and so plugs straight into the Nascom with no hardware changes, extra cards, etc. The FDC is capable of driving up to three double sided drives. 2K of software is supplied in EPROM to fit in locations B000H - B7FFH. The FDC comes complete with a Shugart SA400 drive in a steel case with PSU, software and documentation for about 300.00.

The second version is fully CP/M compatible. The BIOS and I/O routines are supplied in EPROM for use at F000H, the video being

at F800H. A new MD ROM is supplied to reconfigure the N2, but small hardware changes are required for the N1. The FDC is supplied with a Shugart SA400 in steel case with PSU, BIOS and I/O in EPROM, new MD ROM for N2, CP/M operating system with EBASIC and documentation for about 370.00.

THE NEW HENELEC PROM-PROG MK II. Based on the popular Henelec PROM-PROG, this new version is capable of programming both 2708 (multi rail types) and 2716 (single rail types). The control software has been rewritten for NAS-SYS. The programmer has been designed to plug directly into a Z80 PIO.

Price in kit form 20.95 + VAT

## interface software

MACHINE CODE PROGRAMMING FOR THE NASCOM 1 & 2. By G.R.WILSON.

Author's Preface.

"This book is intended for the novice NASCOM programmer. The approach is to take the reader step-by-step through most of the impressive Z80 instruction set, illustrating the different instruction groups with short programs.

"Programming home computers is essentially a creative activity, requiring both imagination and a knowledge of the computer. It is hoped that this book will provide the reader with the 'nuts and bolts' so that he can create programs for the use and entertainment of both himself and others."

Graham Wilson
